

THE GLOBAL DATABASE OF NATIONAL HIV/AIDS GUIDELINES

Universal Access to HIV Treatment, Prevention, Care and Support is a global commitment to achieve the Millennium Development Goal 6, which seeks to “*halt and reverse the spread of HIV*”. The commitment, articulated in the 2006 UN Political Declaration on HIV/AIDS, is led by countries worldwide with support from UNAIDS and other development partners. As part of their efforts to eliminate AIDS, countries develop national HIV/AIDS guidelines for program design and management of people living with HIV. Successful dissemination and application of these evidence-based guidelines are instrumental in achieving universal access.

This database includes the national guidelines on adult and paediatric antiretroviral treatment (ART); HIV testing and counselling (HTC); prevention of mother-to-child transmission (PMTCT); HIV/TB (The *Three I's for HIV/TB*); and opportunistic infections (OIs).

The following table lists the most recent guidelines from 79 countries/regions (Last updated: May 2013). Please follow the hyperlinks to download the actual documents.

Guidelines are revised frequently and we are also missing policies for many countries. This is a "wiki-style" effort and we rely on our readers to help us to update this database. Please send any new and/or updated guidelines to

Reuben Granich
Senior Advisor for Care and Treatment
